

IN THE CLAIMS

Please amend claims 28 and 31 as follows:

B1

28. (Amended) A gaseous composition comprising at least one precursor of a metal oxide, [and] an accelerant selected from the group consisting of organic phosphites, organic borates, and water, and a precursor of silicon oxide having the formula $R_mO_nSi_p$, where m is from 3 to 8, n is from 1 to 4, p is from 1 to 4, and R is independently chosen from hydrogen and acyl, straight, cyclic, or branched-chain alkyl and substituted alkyl or alkenyl of from one to about six carbons, and phenyl or substituted phenyl, and wherein said composition is gaseous at a temperature below about 200°C at atmospheric pressure and is adapted to deposit at least a first layer of an oxide and silicon oxide onto a glass at a rate of deposition greater than 350Å/sec.

B2

31. (Amended) A gaseous composition comprising a metal oxide precursor, [and] an accelerant selected from the group consisting of phosphites, borates, water, alkyl phosphine, arsine and borane derivatives, PH_3 , AsH_3 , B_2H_6 , O_2 , N_2O , NF_3 , NO_2 , and CO_2 , and a precursor of silicon oxide having the formula $R_mO_nSi_p$, where m is from 3 to 8, n is from 1 to 4, p is from 1 to 4, and R is independently chosen from hydrogen and acyl, straight, cyclic, or branched-chain alkyl and substituted alkyl or alkenyl of from one to about six carbons, and phenyl or substituted phenyl, and wherein said composition is gaseous at a temperature below about 200°C at atmospheric pressure and is adapted to deposit at least a first layer of an oxide and silicon oxide onto a glass at a rate of deposition greater than 350Å/sec.
